

Reaching more patients with cell therapy

The **Bristol Myers Squibb Cell Therapy Organization** has spent 20+ years in pursuit of unlocking the full potential of cell therapy and delivering transformative treatments to patients with blood cancers and beyond. We have **treated more than 15,000 patients** and built a network of **hundreds of academic and community centers** that offer access to this innovative treatment option.

Our bold vision for the future is one in which hundreds of thousands of patients are treated with cell therapy. This requires not just scaling research, development and manufacturing, but changing the face of delivery, so that the patients we reach reflect the realities of the diseases we treat.

Today

Only **2 in 10 patients** eligible for cell therapy treatment are receiving it

CAR T cell therapy is only available in **<4% of U.S. healthcare centers**¹

Patients with income <\$40K are **~60% less likely to receive treatment** than those with income ≥\$100K²

Data recently published showed Black and Hispanic patients are **50% less likely to receive CAR T treatment** than other patient populations⁴

Creating a better tomorrow

At BMS, we believe it is imperative to **expand cell therapy treatment** by challenging current practices, assumptions and barriers that limit access along certain geographic, demographic or socioeconomic lines.

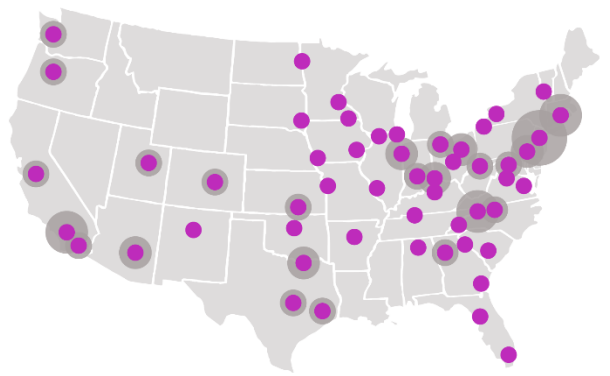

Partnering with stakeholders from across the healthcare ecosystem, we're leading initiatives designed to **ease patient burden without sacrificing patient safety, expand access in underserved communities, and offer support** for those who have been prescribed our medicines.

In June 2025, the U.S. Food and Drug Administration (FDA) approved label updates for all CAR T cell therapies reducing certain monitoring requirements. Together, these updates reflect an **increased confidence in the efficacy and safety profile of cell therapy** and will help to **ease known barriers to cell therapy treatment and administration**.

Bringing CAR T treatment closer to patients

BMS is committed to connecting patients, caregivers, and healthcare providers in communities around the United States to cell therapy near them.

Right now, we have more than **150 treatment centers across the U.S.** and our network is growing. BMS is focused on **rapidly expanding the geographic footprint of cell therapy**, with a renewed effort to add community cancer centers nationwide, helping further reduce travel time and duration of stay away from home, loves ones and work.

Supporting patients' CAR T journey

For patients who have been prescribed a BMS CAR T cell therapy, but may require additional support, there are services available.

On-demand patient guidance: enrolled patients will be assigned a personal Patient Support Navigator to provide customized solutions and support throughout their treatment journey.

Logistical support: eligible patients* and a caregiver can receive transportation, lodging, and meal assistance during the CAR T process.

Financial assistance: through a Copay Assistance Program, out-of-pocket expenses for commercially insured patients may be covered for BMS CAR T cell therapy products.*^
